

Online Journal of Public Health Informatics

A leading peer-reviewed, open access journal dedicated to the dissemination of high-quality research and innovation in the field of public health informatics.

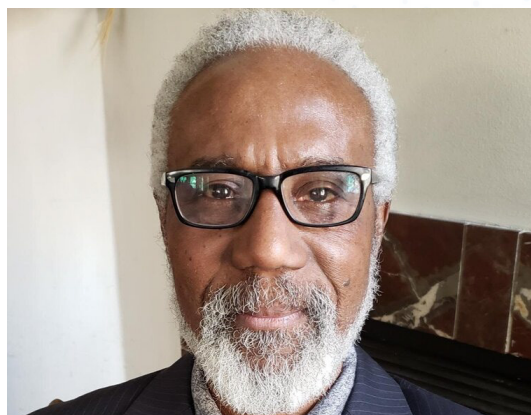

Open access | Peer reviewed | PMC, Scopus, DOAJ indexed

The emergence of public health informatics as a professional specialty is part of a larger development of informatics in related health fields, such as medicine, nursing, pharmacy, and dentistry. Interest in informatics as a specialty in these areas reflects the importance that data collection, analysis, evaluation, and utilization now play in the health care sector.

In response to the new role of health-related informatics, the Online Journal of Public Health Informatics (OJPHI) has been created to service the growing professional audience in these fields.

The mission of OJPHI is to satisfy the growing need for public and population health informatics and best practices among health practitioners, researchers, educators, and policy makers. The journal serves as a portal for knowledge dissemination for research in public health informatics. The journal will include a variety of content including peer-reviewed articles, book reviews, ad technology reviews, students' capstone projects, working papers by researchers, interviews and commentaries.

Call for papers for the theme issue:
"Precision Public Health"

Edward Mensah, PhD, MPhil
Editor-in-Chief, Online Journal of
Public Health Informatics
